Mr. Ricky Craps serves as Dennis Corporation's Vice President and Construction Services Manager. Joining Dennis Corporation in 2009, Mr. Craps is an accomplished construction manager with years of experience providing project management, special inspections, materials testing, cost estimating, quality control and quality assurance testing, and construction engineering and inspections on various types of projects. His background encompasses several areas of construction including transportation, building, governmental, commercial, residential, and educational facilities. Mr. Craps is certified through the SCDOT, ACI, SCDHEC, HAZMAT, OSHA, USDA, OSE, SCLLR, and OSF.

Overseeing Dennis Corporation's Special Inspections and CEI divisions, Mr. Craps has the ability to properly plan and prepare for a project's scope which helps to develop a project that will remain on schedule and within budget. He manages over 15 licensed and certified inspectors that work all over the State of South Carolina. This advantage allows for a flexible schedule which means he can accommodate our clients having inspectors on-site within a few hours of receiving notice. Staying true to this business model, Mr. Craps' repeat clients appreciate his ability to provide a quick response and get inspectors on site to move projects along.

Repeat business has led Mr. Craps to greatly expand the Special Inspections division and CEI division of Dennis Corporation's Construction Management department over the course of his tenure. The Special Inspections division covers Chapter 1 and 17 inspections of additions and renovations to existing buildings, as well as new construction projects. Projects that Mr. Craps has managed include school facilities, speculative buildings, parking garages, and government facilities.

The CEI division is fully staffed and equipped to provide construction phase services including inspection, quality assurance, quality field testing/sampling on roadway and sidewalk projects. Projects that Mr. Craps has managed include roadway widening projects, intersection improvements, dirt road paving projects, and sidewalk projects.
